(54) Vibration isolating apparatus and vibration isolating table

(57) A vibration isolating apparatus and a vibration isolating table for reliably controlling vibration of an object of vibration isolation. A coil-mounting main body (18) is mounted on the vibration isolating table and a yoke-mounting main body (20) is mounted on a floor (14). A coil (24) of the coil-mounting main body (18) is disposed in a gap of a yoke (26) where magnetic flux passes through, in a state in which the coil does not contact the yoke. An acceleration sensor for detecting a vibration is mounted on the vibration isolating table and is connected to a controlling device. The controlling device receives an acceleration detecting signal from the acceleration sensor and controls an electric current applied to the coil (24) such that vibration acting on the vibration isolating table becomes zero. Since the coil (24) and the yoke (26) are disposed in a non-contact state, even though vibration shifted in any direction other than a direction in which the coil (24) moves is generated on the floor (14), the vibration is not transmitted to the vibration isolating table.

CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ All claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for all claims.
- ☐ Only part of the claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claims:
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

☒ LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirement of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claims 1,2,19: Vibration isolating apparatus based on the voice coil motor principle.
2. Claims 3,20: Bidirectional vibration isolating apparatus.
3. Claim 4: Coil shape.
4. Claims 5-8: Vibration isolating apparatus controlling means.
5. Claims 9-11: Voice coil apparatus as shown in fig. 1,2.
6. Claims 12-14: 2nd embodiment shown in fig. 3.
7. Claims 15,16: 3rd embodiment shown in fig. 5.
8. Claim 17: 4th embodiment shown in fig. 6.
9. Claim 18: 5th embodiment shown in fig. 7.

- ☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☒ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respects of which search fees have been paid, namely claims: 1,2,3,19,20
- ☐ None of the further search fees has been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

ABSTRACTED-PUB-NO: EP 701314A

BASIC-ABSTRACT:

The vibration isolation appts. has a magnetic force generator (24), a coil, with a gap allowing passage of magnetic flux in a direction intersecting the vibration direction. The generator is connected to either the site of vibration or the vibration receiving site. A conductor passes through the gap perpendicularly to the vibration and is separated from the generator.

The conductor is connected to either the vibration receiving site or the site of vibration, opposite to the generator. A control unit charges the conductor with an electric current to allow it to generate a force acting in a direction opposite to the vibration direction w.r.t. the magnetic force generator.

USE/ADVANTAGE - For electron microscope, precision balance, precision machine tool, and vibration isolating floor. Prevents vibration in predetermined direction and prevents vibration of any direction other than predetermined direction from being transmitted to object to be isolated. provides vibration isolation table with reliably controlled vibration.

ABSTRACTED-PUB-NO: EP 701314B

EQUIVALENT-ABSTRACTS:

The vibration isolation appts. has a magnetic force generator (24), a coil, with a gap allowing passage of magnetic flux in a direction intersecting the vibration direction. The generator is connected to either the site of vibration or the vibration receiving site. A conductor passes through the gap perpendicularly to the vibration and is separated from the generator.

The conductor is connected to either the vibration receiving site or the site of vibration, opposite to the generator. A control unit charges the conductor with an electric current to allow it to generate a force acting in a direction opposite to the vibration direction w.r.t. the magnetic force generator.

USE/ADVANTAGE - For electron microscope, precision balance, precision machine tool, and vibration isolating floor. Prevents vibration in predetermined direction and prevents vibration of any direction other than predetermined direction from being transmitted to object to be isolated. provides vibration isolation table with reliably controlled vibration.

US 5693990A

The vibration isolation appts. has a magnetic force generator (24), a coil,

with a gap allowing passage of magnetic flux in a direction intersecting the vibration direction. The generator is connected to either the site of vibration or the vibration receiving site. A conductor passes through the gap perpendicularly to the vibration and is separated from the generator.

The conductor is connected to either the vibration receiving site or the site of vibration, opposite to the generator. A control unit charges the conductor with an electric current to allow it to generate a force acting in a direction opposite to the vibration direction w.r.t. the magnetic force generator.

USE/ADVANTAGE - For electron microscope, precision balance, precision machine tool, and vibration isolating floor. Prevents vibration in predetermined direction and prevents vibration of any direction other than predetermined direction from being transmitted to object to be isolated. provides vibration isolation table with reliably controlled vibration.
